Lenouvel Louis

As a work-study engineering student at ISEP, specialising in AI and Data Science, I design and deploy Artificial Intelligence systems (Machine Learning, Deep Learning) applied to business issues. After graduating in September 2026, I hope to pursue a career in AI/Data Engineering, providing reliable, industrialised and performance-oriented solutions.

Skills

AI & Data Science
- Languages: Python (Pandas, NumPy, Scikit-Learn, TensorFlow, PyTorch).
- Machine Learning: Supervised/unsupervised models, evaluation & metrics.
- Deep Learning & Vision: CNN (EfficientNet), OpenCV, Image segmentation.
- Data Prep: Feature Engineering, Cleaning, Data Mining.

Data Engineering & BI :
- BI tools: Power BI (interactive dashboards & DAX).
- Databases: SQL (PostgreSQL, MySQL), MCD/UML modelling.
- Pipelines: FastAPI, xAPI data ingestion, ETL.

MLOps & Deployment :
- Industrialisation: Docker, CI/CD, Git/GitHub, Azure.
- AI Deployment: Gradio, Hugging Face Spaces (Production).
- Environments: VS Code, Jupyter Notebook, Google Colab.

Web Development :
- Frontend: Angular, TypeScript, HTML5/CSS3.
- Backend: Node.js, REST APIs.

Languages

- French: fluent
- English: B2 (TOEIC score of 885)
- German: basic knowledge

Profile & Interests

- Profile: Rigorous, committed & team player.
- Judo (6 years): Discipline & black belt training.
- International: Travel (Germany, UK) & mobility.
- Passion: AI monitoring (Vision, DL) & API creation.

Projets

- **DATA PIPELINE – LEARNING ANALYTICS (IKIGAI GAMES)**
  - Design of an end-to-end xAPI pipeline for ingesting and processing educational data.
  - Development of FastAPI APIs and automation of ETL workflows.
  - Docker containerisation and implementation of CI/CD for reliability and scalability.
  - Languages & tools: Python, FastAPI, PostgreSQL, Docker, Git, CI/CD, xAPI.
- **TO BEE OR NOT TO BEE**
  - Classification and segmentation of 347 images of pollinating insects (bees vs. bumblebees)
  - Extraction of visual features and ML modelling to differentiate species
  - Languages & tools: Python, scikit-learn, TensorFlow, OpenCV
- **AUTOMATED DETECTION OF DEEPFAKES**
  - Development of a DL solution to identify deepfakes in a dataset of 16,000 diverse images.
  - EfficientNet-B0 frozen architecture + trained lightweight head.
  - Languages & tools: Python, PyTorch, TensorFlow, Streamlit.
- **METRO VISION**
  - Detection and classification of line pictograms from real images (station photographs)
  - Extraction of visual features + supervised ML model (multi-class classification)
  - Languages & tools: Python, scikit-learn, OpenCV

Professional Experience

- **SEPTEMBER 2023 – SEPTEMBER 2026**

  IKIGAI Games for citizens

  Data Engineering Apprenticeship
  - Development of Python APIs (FastAPI) for collecting and using educational events in xAPI format (EdTech standard).
  - Extraction, transformation and validation of usage data from educational games.
  - Contribution to data quality and consistency: automatic checks, standardisation, monitoring.
  - Implementation of automation scripts (Docker) and technical documentation.
  - Tools: Python, FastAPI, Docker, xAPI, Git.

Formations

- **COMPUTER ENGINEERING PROGRAMME | ISEP**
  - 2023–2026
  - Specialisation: Data Intelligence (AI/Data Science)
- **ACADEMIC SEMESTER ABROAD AT HANZE UNIVERSITY**
  - Février – Avril 2026
  - Course: System Modelling, Leadership & Intercultural Teamwork
  - Groningen (Pays-Bas)
- **B.U.T. COMPUTER SCIENCE, PARIS CITÉ UNIVERSITY (DESCARTES)**
  - 2021–2023
  - Development & Data
